

General Description of Event

EACCME Event Number: 9597

Official Title of the CME Event: 45th Congress of the International Society of Paediatric

Oncology (SIOP 2013)

Website: http://www2.kenes.com/siop
Event Dates: 25-28 September 2013
Location (City/Country): Hong Kong, China

Participation, Credits Claimed, Certificates Issued

Anticipated Number of Participants:

As submitted to EACCME upon application.

1,800

Actual Number of Participants:

1.500

Number of Certificates Issued to Date:

Indicate the number of participants that claimed credit and received a certificate at the time of this report (online system remains available). Attach the Credits Claimed spreadsheet.

314

Percentage of Participants Claiming Credit:

20,9%

Disclosure of Conflicts of Interest (COI)

Number of Potential Conflicts of Interest Reported by Committee and Faculty/Speakers:

Indicate the number of committee members and faculty/speakers that reported a COI. Attach final Disclosure/COI spreadsheets.

4

Concerns of COI/Bias by Participants:

Include evaluation results to the question of bias/conflict of interest.

	Strongly Agree	Agree	Disagree	Strongly Disagree
The accredited content was balanced, objective, and free from commercial bias.	142	203	8	1

Commercial bias comments/concerns:

- commercial area should not influence on the decisions to treat our patients
- nil (2x)
- No (3x)
- None (4x)
- Poor communication as to poster presentation. It should be
- emphasized that poster presentation will have a number
- even on the email correspodence.
- some of the speakers presented excellent data but with
- poor english , they didnot understand most of questions, to
- be fair to them esp with their good data, somebody from the
- same instuition with good english and senior should have
- been there to help with answering the questions
- The first day educational session was very poorly done.
- Each speaker presented their work and missed an
- opportunity to educate the audience about the field
- The organisation of the lunch was not well organized. There should be tea/coffe available all the time.

Evaluation Results and Summary

Number of Evaluations Collected:

367

Percentage of Participants that Evaluated Event:

24,5%

Main Conclusions:

Provide a short summary of key points drawn from evaluations: usefulness, educational value, quality of content, quality of speakers, etc. Attach complete Evaluation Results Summary.

USEFULLNESS

According to the filled in evaluation forms there were in general sufficient opportunities to network with colleagues. From the 367 filled in evaluations forms 311 participants will make changes to their professional practice based on what they learned at the congress. For 333 participants that filled in the evaluation, this educational event will improve their professional performance.

EDUCATIONAL VALUE

The learning objectives are being met by most participants. According to the filled in evaluation forms, the learning objectives were met by the following percentages of total participants:

- Learning objective 1:Discuss recent research in pediatric oncology: 98% of the participants
- Learning objective 2: Identify treatment options for all cancer types, including leukemia and brain tumours, in children and young people: 99,4% of the participants
- Learning objective 3:Assess new technologies and their potential for more effective work practices and better patient outcomes: 96,3% of the participants
- Learning objective 4: Establish an international network of international pediatric oncologists, as well as paediatric surgeons, radiation specialists, haematologists, and specialist nurses: 96,9% of the participants

 Participants acknowledge the importance of CME/CPD credits. CME accreditation is for 69,6 % of the participants that filled in the evaluation a reason to attend SIOP 2013.

QUALITY OF CONTENT

The content was in general of high quality and most topics were covered. Most participants are satisfied. However, some participants that filled in the evaluation made a comment about the facilities for networking and would like to see easier acces to abstracts.

Topic areas or workplace challenges that participants would like to see addressed in future events:

- adolescent and young adult cancer
- childhood and adolescent leukemia
- Combination therapies including chemotherapy, surgery and radiation therapy, specifically brachytherapy
- Hepatoblastoma
- Late effects
- Leukemia, HSCT
- lymphoma
- More molecular based adavnces in simple concept for clinical people
- neuroblastoma
- PODC

QUALITY OF SPEAKERS

The quality of most speakers was good. 96,2% of the participants that filled in the evaluation agree that the quality of the speakers was excellent.

Response Text

" Second tumors" in pediatric oncology

about BMT in developing country

adolescent and young adult cancer

BCR-abl like leukemia

bone marrow transplant discussion

Bone Marrow Transplantation in Hematological Malignancies

brain tumors

lymphoma

supportive care

brilliant coverage of all relevant topics!

cancer genetic risk assessment and screening

childhood and adolescent leukemia

Cisplatin-related hearing loss in connection with psychosocial problems, school performance

CLINICAL & GENETIC EXPERIENCE IN PEDIATRIC LEUKEMIA\LYMPHOMA

Clinical ethics in paediatric oncology

Combination therapies

Combination therapies including chemotherapy, surgery and radiation therapy, specifically

brachytherapy

Continue to offer more opportunities to network with colleagues around the world - this is what makes

SIOP unique. More time between sessions would be helpful for networking

Development of universal training criteria

discussion on topics relevant to pediatric clinical trials, challenges, guidelines

electronic data management

Ewing's sarcoma

Focussing on topics - challenges in management

Of leukaemia and solid tumors

Gene classification of pediatric hemotology and oncology

Germ cell tumors & Renal tumor including RCC: recent advances

Guideline to treatment side effect, emergency and treatment high dose methotrexate, cytarabin,...

haematology

HEMOPHAGOCYTIC SYNDROMA

Hemophagocytic syndroma in pediatric patients

Hepatoblastoma

hepatoblastoma

High dose chemotherapy for osteosarcoma

Histiocytosis, Neuroblastoma

hodgkins lymphoma

How to keep the lives of cancer children if the initial heavily treatments could not be given. More safe and tender chemotherapy should be needed for children in developing and developed countries. How to treat patients post bone marrow transplantation

I do attend other pediatric oncology that address the practice where I practice. SIOP is a good platform for me to learn about practices and challenges in other parts of the World. I use this as a platform to hear from leadrers from other part of the World. My response to some of the evaluation questions might appear disrespectful. The reason for the response is local regulation wouldn't allow me to change my practice. It has nothing to do with information presented.

I like the broad spectrum approach with multiple topics.

i would be interested in current practice and care for patients, rather than just new meds/studies.

I would like more educational sessions.

I would like to add immunotherapy in pediatric cancer

I would like to have more discussion on soft tissue sarcomas.

I would like to see a session on new targeted therapies for some of the major pediatric cancers since that seems to be the new wave in advancements in oncology (at least on the adult side).

immune deficits in pediatric patients with cancer

immunotherapy

Improving pathologic diagnoses for developing countries

inform about the siop protocols

IPNO is too focused on surgical issues.

Langerhans cell histiocytosis formerly known as histiocytosis X including various entities such as Letterer Siewe disease, eosinophilic granuloma.

Late effect, teaching experience in hospital for cancer children ,complementary therapies for cancer .

Late effect, teaching experience in hospital for cancer children, complementary therapies for cancer.

Late effects

Late effects.

Soporte therapy

Legal and ethcal issues regarding data sharing

leukemia

Leukemia, lymphoma, solid tumors

Leukemia, HSCT

lymphoma

lymphoma

Lymphomas

Meals need to be organized better.

Melanoma

minimal residual disease in pediatric AML

defining treatment response in pediatric leukemia

Molecularly guided therapies

More attempts at setting up more collaberation between centres regarding rare tumours

more combined symposia (SIOP / IPSO / PROS)

More elaborate discussions on Stem Cell Transplant in Malignancies

More focus on hematological malignancies, especially lymphomas, incorporating results of various cooperative groups trials

More molecular based adavnces in simple concept for clinical people

More molecular based adavnces in simple concept for clinical people

more molecular based advances in simple words for clinical work

more neuroblastoma

More nursing roundtables and interprofessional meetings

more sarcomas

More sessions about pediatric transplantation, complication of treatment, myeloproliferative diseases.

more up to date research

n/a

neuroblastoma

neuroblastome

New tools for assessment of children with cancer (late effects, quality of life, sensory functions,

intellectual level, neuropsychological assessment).

none

None

nothing specific to tell

Nursing care

Nutrition

Oncologic-emergency

paediatric oncology management in developing countries with limit sources

Paediatric oncology protocols for developing countries, especially depending on the available resources.

Paediatric palliative care

palliative care

Palliative care in paediatric oncology patients

pediatric oncology in developed countries

Allo HSCT

pediatric psycho-oncologists and their role in multidisciplinary equip/

multicultural challenges and their role in treatment abandonment/adolescents and AYA

Please continue to offer additional time for networking with colleagues - this is unique to SIOP.

PODC

PODC and ICCCPO Areas

PODC, Pediatric oncology nutrtion

proton radiotherapy

Provide more specific time for any disciplines to have time to meet, share n discuss topics, specially from low and middle income countries with the guide from high income countries and follow up workforce for the expected outcome in the future.

Psychosocial care; integrating the clinical and psychosocial models of care

psychosocial issues in the workplace

pychosocial issues for all health workers with parents

quality control of pediatric oncology units

Quality of life of children with cancer

Supportive care

Radiation for children cancer

Radiation oncology

renal tumors, neonatal tumors, palliative care, space for discussion of difficult cases

Research in refractory leukemia or solid tumor.

since I am doin research on neuroblastoma so I am more interested in that.

any recent research in pediatric oncology.

Solid tumor

solid tumor

Stem Cell Collection

stem cell use

supportive care, in particular infections need to be highlighted in more detail

Surgery, rhabdomyosarcoma, soft tissue sarcoma

Surgical techniques of tumor removals

Survivors educational program

target thearpy in cancer

Target therapy

target therapy, bone tumors

tha same as in this event

tha same as in this event

the past sessions after closure of the programm were VERY interesting but nearly empty. I really would like to have these meetings earlier, so more people can participate

the treatment of refactory and relapse leukemia (ALL and AML) without HSCT in developing country Therapeutic regimen applicable in a third-world country setting.

There is too little Stem Cell Transplantation

There seemed to be a major focus on neuroblastoma at the conference. I would like to see a little more balance in the mix of presentations. Also panel discussions on international protocols and differences in collaborative group approaches would be appreciated.

There should be more 'meet the expert sessions'. More such sessions spread out during the day should be held.

Transplanti

treatment and management of solid tumors

treatment of neuroblastoma

treatment of solid malignancies in children

Treatment options in vascular tumor

treatment strategy of Neuroblastoma for resource challenge nations

SIOP 2013 Evaluation - Miscellaneous

Tell us what you think! What did you like most and/or least? Anything else you wish to tell us?

Response Text

After meet the expert, I would appreciate if light meal or breakfast was prepared.

Amazing international conference!

As always at SIOP: Parallel sessions made me miss presentations I also wanted to join.

ASPHO annual far exceeds quality of SIOP. ASH & ASCO exceed both.

Best

better comminuctions between diffrent oncology centers

better facilities for networking - perhaps some sort of online messaging system to help you connect with people coming from other institutions even if you don't have their contact details

Big disadvantage that abstracts were not available before or at least at the meeting. Abstracts should be given via USB or vias internet before or at least at the beginning of the meeting.

I did not even know the abstracts of the session which I was chair of!

Cession on neuroblastoma was excellent

CNS sessions

Easier access to abstracts; ability to scroll through abstracts.

educational & organisational part excellent. Food part not good (minimal vegan/lactovegan options)

educational day: all topics

Everything was perfect and thank you so much for giving scolarships for nurses from low and middle income countries.

Excellent congress

Excellent meeting. Well organized. Venue was great.

excellent!

Food ran out twice during day 1! Otherwise a well organized meeting.

For those living away from the centre, it was very difficult to get a taxi. The Centre should have arrangements whereby there are more taxis, as one would expect at an airport, for example.

good

good catering as well

Good to have 3 brain sessions. More sarcoma would have been good.

Great job!

Handicapped accessibility was very limited in Hong Kong and at the convention center. I could not access a map for the convention center in advance and elevators were scarce and inconvenient. Please consider this for future venues. thank you!

I am working for infection control in pediatric oncology in my country. IPONG invited me to join their group meeting. I think it was very helpful for me.I also hope that I will have more opportunities to work with IPONG and PODC for the improvement of the conditions in Bangladesh. This is the 2nd time I joined SIOP conngress, Ist was in London.

I would like to express my gratitude and thanks to SIOP committee for providing me the scholarship, thus encouraging for my future work. Really I am so inspired that I hope I will avail the opportunity to present my work and experience in next SIOP congress. All the changes came to me when I visited St Jude Children Research Hospital.

I had learned a lot of new idea. I like the topic "Challenges in the management of infants solid tumors" I learned so much from all topics of ICCCPO area

ااد مااا i

I like most educational session and PODC topic on abandonment

I like the activities for survivors the most. We can socialize with other survivors aross the world and know how to have a better life after treatment. Maybe for survivors, we can have more outdoor activities to get closer link with each other.

I like the activities for survivors the most. We can socialize with other survivors aross the world and know how to have a better life after treatment. Maybe for survivors, we can have more outdoor activities to get closer link with each other.

I liked Dr. Pui's Talk the most.

I liked most keynotes

I liked the problem case presentation the most.

I liked very much the SIOP award seesion and the Schwessguth prize lecture

I loved the city was surprised baout most of things. The acess to the congress was a little confuse but the city was a great sistem of cabs.

I mostly liked the effort nurses are taking to researh issues that are challeinging in their evry day working environment and that they are taking time to try and formulate universal nursing guidelinnes to improve the qaulity of patient care.

I really enjoyed the opening ceremony and how local culture was brought into it. Also, I thought the 5K fun run was a great idea. The sessions ran on time (for the most part) which I appreciated.

I the future it would be great if Kenes worked with locals who really know the hotels and their pros and cons. I think the poster session was not well organized. Very few persons attended (wrong time-friday evening)and the winners of the competision should have had more attention.

I was disturbed by the way the nurses session were run, the first day speakers were given a token of appreciation but on the other days nothing was given. I was left with the question, were the first day speakers regarded very important than the rest?

i wish there was PPO meeting during the congress

I wish you put Halal food between the food you provide during the lunch break for Muslims

I wonder why the congress service doesn't negotiate more favourable hotel prices than those obtainable on the internet. This happens regularly!

I would have liked it, if there would have been some more basic scientific talks.

I'm very glad that I got a scholarship to help me to attend the international conference, so I can understand the recent research in pediatric oncology and will improve my professional performance.

For an ordinary doctor in my hospital, the chance to attend the international conference is very little. Improve coffee break

In some sessions a need for better assistance from the tech people was required.

In the IPSO sessions there was TOO MUCH time for questions and discussion so that every session finished early. Time would have been better spent by accepting more of the abstracts for presentation.

It was a good experience

IT WAS A GREAT MEETING

It was a great meeting!

It was too cool everywhere in the meeting place. I almost got a cold.

It would have been helpful to have more knowledgeable conference staff on hand.

It's a wonderful conference.

key note lectures were great

need more meet expert sessions

to try to avoid overlab between symposiums to give chance to attend as much as possible

food could be more culturally diverse for participants

key note lectures were great.

to avoid overlab between symposiums as possible to get chance to attend more activites

more meet the expert sessions

comment on coffee breaks and lunch: need for more culturally diverse food and more coffee break tables to avoid crouds

Keynote

Keynote speakers should also present for other discplines, not only for the medical discipline.

least: no discussion or presentation of new findings

lectures of Dr.pui

Liked PODC sessions more than others, as it was relevant to our setting. The Key note addresses were nice. Location was great.

Lovely venue, excellent ipso meeting, really well organised and attended. Thank you.

more focus on leukemia

more opportunities for junior staff to present

more research in drugs for solid malignancies

more room to sit with colleagues are desperately needed

More tables for eating/ networking. Wish there was more time for each talk - and that I could have been in more than one talk at a time... Otherwise - perfect event. Look forward to next year

More time for interaction for meet the expert sessions

Most --> The venue and the quality of the speakers

Least --> space for discussion of difficult cases

n/a (2x)

Overall a great conference. Appreciate the wide variety of viewpoints from different healthcare systems. Overall a well organized congress. The catering did not, howver, meet the standards as the food ran out both during lunch and gala dinner. This was a problem especially on day one when many delegates were without

a single meal during the whole day.

Overall I am pleased. However, coffee and food breaks were not good. To much aiting and not enough to eat!

overall it was a nice experience for me to interact with the experts in the field of pediatric oncology. i likes various IPSO sessions, free paper sessions and of-course the poster sessionswhich allowed me to gain immense amount of exposure and knowledge.

overall was good venue and presenters. in the future hoping to see all countries present provided an opportunity to interact with experts from all over the world.a unique opportunity. poster should have been displayed at a more prominent place, like around the area where tea was served. there was limited attendance in the hall where posters were displayed. Little of vegetarian food served, mostly had to rely on salads...lot of options were there like vegetable sandwiches etc Radiation

regenerative medicine should get more importance

Since about 25 years, I am working on Cisplatin related hearing loss as pedaudiologist in Münster, Germany. Knowledge about Cisplatin related hearing loss is very important for giving advice concerning speech development and school performance. I was involved in the establishment of a German guideline concerning the care of children and young adults who have survived cancer and which is further developed under my scrutiny. I am member of the Late Effects Surveillance System (LESS) since its foundation and chair the Ototoxicity late effects trials in German patients. I am also a member of the PanCare Ototoxicity group. My focus are ototoxicity studies on clinical risk factors and on the moleculargenetic background of individual Cisplatin tolerance. In support of early clinical identification of Cisplatin induced hearing loss, the Münster team developed and validated the audiological Muenster Classification of high frequency hearing loss with approved high sensitivity and specifity. An early identification of children with a higher individual risk of Cisplatin related ototoxicity gives us the opportunity to start otoprotection. I could give an overview about the status of moleculargenetic studies (most of them from Münster) and otoprotectice methods, e. g. as lecture. SIOP award session and CHIC protocol-like mostly

Thank you for great Conference:)

Thank you for very nice conference!

Thank you so much. This is my first SIOP

the 2nd day all the sessions I wanted to attend were at the same time, there was a large discrepance with the 1st day

the best of IPSO is excellent

The brain tumor educational session did not have the new relevant information for the treatment of pediatric brain tumors

The content of the meeting was great as were the networking opportunities. The organisation was not so good - problems with meal and drink distributions and lack of support for special dietary needs. There seemed to have been consistent problems with speakers assessing presentations.

the lecture were very good

the luekmeia symposium was great! THe neuroblastoma research sessions were great. Never quite enough time to talk to all the different colleauges, maybe somehow some smaller workshops

The moderator for our poster session (supportive and palliative care) did not turn up, so we waited for almost 2 hours and then the lights were turned of...

The most: the quality of speaker

The MTE meetings should start late in the afternoon instead of early mornings

The MTE session should be late in afternoon instead of morning.

The networking between pediatric oncologists and pediatric surgeons (IPSO) is not optimal. One has an impression that IPSO is an autonomous event during the SIOP congress.

The nurses' day is the most impressed.

The opportunity to network with experts

The poster sessions were absolutely dismal. Please organise poster sessions at the end of the day with beer and pretzels or similar!!!

I missed the abstract book sorely and nobody could tell me where to find that information. Should either be sent by email, or distributed as paper version, even when PBC goes paperless.

The rooms were to much cooled down!

The scholarship should be win for the persons who have the poster at the conference.

The SIOP Dinner and IPSO Dinner should not be at the same time!!!

The topics were very educational.

The venue was very good. Spacious and appeared less crowded

The whole experience of SIOP2013 was excellent.

there are more scholarships for Latino members

There are plenty (rather majority) of free paper sessions in SIOP. Many are not very relevant to everyday practice. There should be a balance, with several 'How I treat talks' on common everyday management oncology topics as well

There are wishes as the following:

- Multidisciplinary meeting and sharing for special topics, because in our low, middle income countries we don't have yet or its very rare such that meeting approaches.
- There is a sharing events for nurses educator, nurses practitioner, palliative care nurses with the facilitator guide from expertise nurses.
- Posters presentation more better put in one place, not to separated each others.
- Event local organizer should more be patients, keep smile and friendly
- Provide photo copy machines
- Provide soft copy handouts presentation from computer in the conference area.
- Provide mineral water any time.

This event is more for MD's then biologists, therefor topics are sometimes a bit too wide in one session when both clinic and biology are present.

This is a great educational and professional event!

This SIOP is very useful, well organized, professional. I like the sessions about leukemia and transplantation. This was a great meeting, from A to Z. Congratulations!

This was my first time in such conference. I definitely plan to attend the next SIOP congress in Toronto. I hope I will receive scholarship to attend that congress. The amount of scholarship will need to be incremented since toronto is so far away from my place.

unfortunately, a fair bit of time was wasted in locating presentations at times! It did get better later...

Update about the newest diagnostic and treatment pediatric oncology

venue ran out of food at morning tea Not enough staff to service morning teas

Venue was superb. Not much choices for food and no variation per day. Coffee and water was not available all throughout the convention. It will just be given on designated areas and designated times. Hoping next time it will be drink all you can-coffee and water.

Very good mix of clinical and basic research. Enjoyed Fun Run Great meeting overall!

Very limited handicapped accessibility in Hong Kong. Getting to the main conference hall was challenging. Please consider this for future venues. I could not access a map of the convention center layout in advance. Thank you!

Very well organised and excellent speakers

Welcome reception was excellent.

The venue for the conference dinner was good but the quality of the food was very poor. The meal was also very rushed. More time after the meal to relax and enjoy the venue would have been appreciated. well organised, excellent topics

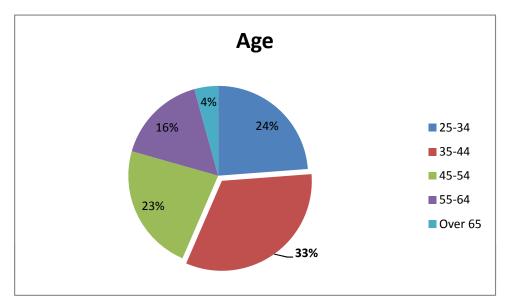

Well organized meeting.

would like more time between sessions to ask questions

SIOP 2013 Evaluation - CME/CPD

How important is CME/CPD credit to you?					
Answer Options	Strongly Agree	Agree	Disagree	Strongly Disagree	Response Count
CME/CPD accreditation is an indicator of high quality education	141	185	11	1	338
Receiving CME/CPD credit is an important reason for me to attend	78	153	92	12	335
I would attend this event again, even if no CME/CPD credit was offered	113	191	34	5	343
Comments, please specify					19
			answer	red question	346
			skipp	ed question	21

Comments, please specify

Accrediatation is essential!

As a retired doctor working for a charity as a volunteer CME is not relevant CPD is

Brilliant venue to allow mixing and meeting from different countries, the excellent ones with ample

resources, to the poorer-resource countries. A much broader idea of how the world of Paed Haem/Onc

works - hopefully, together, for the common good!

CME accreditation is not very important in my country as yet.

CME has now become a requirement. However, I will always attend SIOP, regardless of CME or not.

CME needed for registration as pediatrician in our country

CME not essential, but very much appreciated

CME points are also a motivator if you still want to develop yourself acadeicaly

CME required to maintin licensure

exposure of others place clinical practicerecent advances in pediatric solid tumors

I wouldn't be able to justify the expenses associated with this activity if I couldn't receive CME.

It is of more importance to PhD candidates.

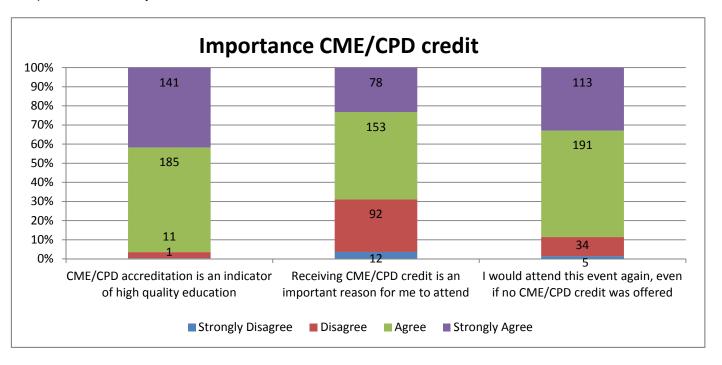

None (2x)

strobgly needed for accreditation in our country

Such type of congress is very good platform for the young investigators specially who wants to work in collaboration These are required only for purpose of satisfying the regulatory authorities.

This activity should always be CME accredited

to improve the service, you should intrduce the eductional activities to it.

SIOP 2013 Evaluation - Updates on SIOP 2013

How did you first hear about this event? (please mark all that apply)		
Answer Options	Response Percent	Response Count
Colleagues	53,6%	186
Professional organizations	48,4%	168
Congress brochures	17,0%	59
Search the internet	10,4%	36

Notes:

Only the Scientific Committee oversees/controls the scientific/education program, content, and faculty. Although listed on the event website, the Local Organizing Committees are NOT involved in this level of planning. They will be required to disclose COI information at a later stage if they are participating as invited speakers/faculty. http://www2.kenes.com/SIOP/GENERAL/Pages/Committees.aspx

Disclosure and Resolution of Personal Conflicts of Interest

In accordance with CME/CPD accreditation criteria and standards for commercial support to ensure balance, independence, objectivity, and scientific rigor in CME/CPD activities, those in control of the educational content disclose potential or actual conflicts of interest, whether due to a financial or other relationship. Disclosure information is evaluated and conflicts of interest resolved. Disclosure is made to participants prior to the activity. Participants will be asked in the evaluation to assess the objectivity and independence of the event.

The Scientific Committee discusses and designs in detail the event program, topics, faculty, and overall congress elements. The committee is appraised of the CME requirements, promoting a certain "peer review" during the planning process. As illustrated above, only one of the committee members had conflicts to report, while the majority of the committee members are independent with no conflicts of interest helping ensure that the resulting program is independent from bias.
