Cover art credit: The cover figure is from Figure 5 in Bleyer, et al. (page 6 of 9). Average Percent Change from 1990 to 2010 in the 5-Year Relative Survival of All Invasive Cancer by 5-Year Age Intervals (vertical bars) and Proportion of All Invasive Cancer in Adolescent and Young Adult (AYA) Patient 15 to 39 Years of Age and in Younger and Older Age Groups (horizontal arrows), United States SEER 9-18 Regions. Kaposi sarcoma and non-Hodgkin lymphoma in males has been excluded because of the HIV/AIDS epidemic that included the early years of the era evaluated. The data demonstrate that, as recently as 2010, 15 to 29 year-olds have had the least progress in survival prolongation among all age groups with cancer below 70 years of age, and that 20 to 24 year-olds have had virtually no improvement during.
