We believe that community participation and support is the key to ICCD’s success.

International Childhood Cancer Day 2022

PLAN FOR ACTION IN YEAR TWO OF ICCD’S THREE-YEAR CAMPAIGN

Better Survival is achievable #throughyourhands

Speak out for children and adolescents with cancer using #ICCD2022 #throughyourhands #cureall
Cancer is a leading cause of death for children and adolescents around the world and approximately 400,000 children aged 0 to 19 years old are diagnosed with cancer worldwide each year.

The most common categories of childhood cancers include cancers of the blood (leukaemia and lymphoma), brain tumours and solid tumours, such as neuroblastoma and Wilms tumour.

In high-income countries more than 80% of children with cancer survive, but in many low- and middle-income countries (LMICs) only about 20% survive.

Even in high-income settings, childhood cancers represent a leading cause of children’s death and of long-term morbidity in survivors.

The origin of childhood cancers is generally unknown, unrelated to lifestyle and cannot be prevented or screened.

Improving outcomes for children with cancer requires early and accurate diagnosis followed by effective treatment.

Most childhood cancers can be cured with a combination of chemotherapies and other treatments including surgery and radiotherapy. Childhood cancer treatment can be cost-effective in all country-income settings.

Avoidable deaths from childhood cancers in LMICs result from a lack of diagnosis, misdiagnosis or delayed diagnosis; obstacles to accessing care; abandonment of treatment; death from toxicity; and higher rates of relapse (disease recurs).

In higher income settings, a lack of therapeutic innovation is a key obstacle and reason for stagnating survival in hard-to-treat malignancies.

Childhood cancer data systems, such as patient registries, coupled with sustained investment in health systems and infrastructure for timely diagnosis and treatment, are needed to drive continuous improvements in the quality of care, and to inform policy decisions.

Childhood Cancer Key Facts

Every 3 minutes a child dies of cancer
## Raising Awareness and Eliminating Myths of Childhood Cancer Survivorship

**CONCERNS and FACTS** developed by Childhood Cancer International and International Society of Paediatric Oncology

<table>
<thead>
<tr>
<th>Concern</th>
<th>Fact</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contagion</td>
<td>Childhood cancer is not contagious. It's safe to play, socialize and interact with children with cancer and childhood cancer survivors.</td>
</tr>
<tr>
<td>Fertility</td>
<td>Some survivors may have fertility and reproductive issues depending on their specific cancer diagnosis and treatment, but this is not true for most survivors.</td>
</tr>
<tr>
<td>Lifespan</td>
<td>Studies have shown that children treated for cancer have a risk of long-term side effects of their treatment; however, shorter life expectancy depends on: a) timing of initial cancer diagnosis; b) treatment type; and c) treatment intensity.</td>
</tr>
<tr>
<td>School achievement</td>
<td>Some childhood cancer survivors have cognitive and learning disabilities due to their specific cancer and treatment, but this is not true for all. Most survivors are high-performing achievers who do very well in their education and career.</td>
</tr>
<tr>
<td>Socialization</td>
<td>During treatment, most children/adolescents with cancer are separated from their peers and unable to engage in regular schooling and other activities. However, numerous studies have shown that as a consequence of the challenges they faced and their experiences, survivors tend to have better coping and increased resilience than their peers. In countries with psychosocial support programs for children with cancer and survivors and/or non-governmental organizations with programs and services that create supportive and nurturing environments for these children/adolescents and families, socialization outcomes are generally good.</td>
</tr>
<tr>
<td>After treatment</td>
<td>Continuing follow up care remains important for survivors due to a higher risk for secondary cancers or chronic health conditions related to their cancer treatment. Vigilance and regular monitoring are critical for early identification and support for any health challenge, or impairment.</td>
</tr>
<tr>
<td>Future</td>
<td>Most childhood cancer survivors return to normal school life and activities after treatment and effectively reintegrate with their family, friends and communities. In some cases, survivors and their families adapt and modify their lifestyles to achieve a &quot;new normal.&quot;</td>
</tr>
<tr>
<td>Stigma</td>
<td>In most countries, childhood cancer survivors are admired and viewed as heroes and warriors who courageously overcame cancer. Childhood cancer survivors are living proof and testimony that childhood cancer is curable. They are the best ambassadors to bring hope, motivate and inspire new patients and their families as well as other survivors.</td>
</tr>
<tr>
<td>Diagnosis</td>
<td>Children/adolescents need to be informed about their cancer. Age-appropriate information can be shared to help the patient understand their condition and the treatment they will receive. This is especially crucial for teens and young adults who need to feel empowered and in charge of their own health and well-being.</td>
</tr>
</tbody>
</table>

Increased awareness and accurate information and knowledge can empower all of us to recognize early warning signs of childhood cancer, make informed choices about our children’s health and counter fears and misconceptions about childhood cancer.
International Childhood Cancer Day (ICCD) is a global collaborative campaign to raise awareness about childhood cancer and its unique challenges, while showing support for children and adolescents with cancer, survivors and their families worldwide.

The 15th of February is marked as International Childhood Cancer Day (ICCD) to highlight the importance of community participation and support in the fight against childhood cancer in every country around the world.

Photo credit: Society to Support Children Suffering from Cancer (MAHAK), Iran
The 2021 theme was: #throughourhands
The focus was on giving tribute to the children and adolescents with cancer, their bravery, their courage, and their resiliency; we also recognize the mark their lives have on the world and how they shape our shared future.

The 2022 theme is: #throughyourhands
The focus is on paying tribute to the health care team and the positive impact they have on the lives of children and adolescents with cancer.

The 2023 theme is: #throughtheirhands
The focus is on paying tribute to the families and caregivers and the positive impact they have on the lives of children and adolescents with cancer.

The three-year campaign for ICCD (2021-2023) is designed to use the universal image of colourfully painted handprints of children to represent survival rates for children with cancer on a national, regional and international scale.

Better Survival is achievable

The primary message of the 2022 ICCD is Better Survival is achievable #throughyourhands.
HOW CAN YOU GET INVOLVED?

Take action! Engage in activities that are similar to what you have done in the past or consider new activities that integrate this year’s theme, Tree of Life (coloured handprints and messages) or related actions.

ICCD 2022: Tree of Life
Virtual and Physical

Continuing last year’s success, we are inviting all the members of the CCI family and SIOP members to participate once again in this global campaign by creating a Tree of Life for your country, symbolizing that childhood cancer is curable and showing the key elements contributing to Better Survival.

As you may already know, the tree will be formed by the multi-coloured handprints, representing the survival rate of children with cancer in your country. The roots will represent the key elements for Better Survival as follows:

1. Responsive government policy
2. Timely and accurate diagnosis
3. Effective treatment
4. Multidisciplinary care
5. Palliative & supportive care
6. Family support
7. Qualified workforce
8. Available and affordable essential medicines
9. Cancer registry
10. Rehabilitation and reintegration

Speak out for children and adolescents with cancer using #ICCD2022 #throughyourhands #cureall
Action One

How to participate at an international level:

To all the members of CCI and SIOP and other ICCD Alliance partners,

From now on, you are called to start a conversation with your stakeholders including patients, families, and health care team and let them know that on the upcoming ICCD, the virtual, interactive, web-based Tree of Life (for both mobile and desktop users) will be available to colour their hands and post their “message of appreciation” from patients/families/survivors to health care teams or “messages of hope” from health care teams to patients.

Due to the continuing COVID-19 pandemic, the virtual Tree of Life responsive website is under modification to reflect the theme #throughyourhands and will be accessible from the 1st of February to the 31st of March 2022.

Instructions for using this virtual platform and requirements for joining are exactly the same as the 2021 campaign and are explained on the Tree of Life website www.iccd.care (available on the 1st of February 2022).

Thank you to the 109 Country Champions from 85 countries who volunteered to review the messages for the ICCD 2021 campaign. All Country Champions will receive another invitation email from us soon, in which we thoroughly explain this year’s instructions.

If you didn’t have the chance to join last year’s campaign as a Country Champion, please feel free to contact us at ICCD@cci.care so we can proceed with registering you as a Country Champion.

### Action Two

**How to participate at an international level:**

To all the childhood cancer-focused NGOs, hospitals and institutions.

Create an ICCD 2022 event or activity any day in February or March including a physical Tree of Life in your setting or in continuation of your previous ICCD events promoting this year’s theme of Better Survival is achievable #throughyourhands.

Then submit your 2022 ICCD event reports before 31 March 2022, through the ICCD website www.internationalchildhoodcancerday.org, which will be shown on the ICCD website under the ICCD activity map.

Examples of how to build a physical Tree of Life and downloadable files will be available on the ICCD website in January 2022.

Action Three

How to participate at a regional level

Advocate for action! Write to active organizations and treatment centers in 3-5 countries in your region (according to the six WHO regions) and inspire them to host an ICCD 2022 event engaging important stakeholders at a political level such as the Ministry of Health and WHO Regional Offices.

Identify three key issues in your country related to the 10 elements for Better Survival (listed on page 6) and advocate for positive change during the month of ICCD.

Members, who are capable and interested in hosting such regional events, please approach CCI via ICCD@cci.care or inform their SIOP Continental President/branch https://siop-online.org/sp_cb/ in advance so SIOP and CCI regional branches can help with promotion.

CCI and SIOP will collect reports and photos of all the events to be shown on the ICCD website and the ICCD activity map after the campaign to show the importance of the collective effort in making a positive impact for childhood cancer.

Buat yang sedang berjuang melawan kanker, saya beserta teman² yang lain, kita pasti bisa sembuh, dan bisa melanjut kan mimpi" kita yang tertunda..tetap semangat semua nyaa...

Levels of Country Engagement
Progress in 2021 and beyond

Focus countries
Country with formal designation recognized in writing from the government to WHO after a formal written request from the country’s Ministry of Health, received by the WHO country office. The requesting country commits to implement the Global Initiative for Childhood Cancer and CureAll actions. Countries receive a formal letter of designation with the agreement of WHO Country and Regional offices.

Most countries in this category may have completed initial assessments related to childhood cancer, many may have started implementation planning related to CureAll, and some may be implementing action plans.

Countries participating in initial activities
Country working on an identifiable project(s) or activities clearly defined regarding one or more CureAll pillar/enabler. There is no official written commitment from the Ministry of Health of agreement with WHO Country office to engage in the Global Initiative for Childhood Cancer CureAll activities to support implementation, and therefore there is no formal designation as a focus country.

Many countries in this category may have completed initial assessments related to childhood cancer, and some may have started implementation planning related to CureAll.

Countries with ongoing dialogue
Country working with either WHO or St Jude or both, with expressed interest in strengthening childhood cancer control without specified activities clearly defined in relation to one or more CureAll pillar/enabler. Some countries in this category may have completed initial assessments related to childhood cancer.

Most of the initial activities related to the childhood cancer agenda are led by Non-state actors, professional organizations, or NGOs.

Regional/Subregional networks, one or two focus countries engaging in collaborative efforts with other countries in the region aligning country-specific strategies with regional priorities. An example is the SEAR-Childhood Cancer Network.

https://www.who.int/activities/improving-childhood-cancer-cure-rate
Inclusion of childhood Cancer as a public health priority is feasible, effective and sustainable.

“On childhood cancer, we are now actively supporting 50 countries, providing medicines in conflict settings including like Yemen and Syria, almost doubling the health workforce, supporting the construction of new cancer centres and the development of legislation to guarantee access to care for children with cancer.”

(DG’s address World Health Summit)

GICC-Different Levels of Country Engagement
Campaign Materials

We are striving to make the ICCD 2022 campaign materials including social media banners, posters, cover photos, logo files, fact sheets along with Tree of Life instructions accessible to all participants in January and available for download from https://internationalchildhoodcancerday.org/

My Journey to completion of treatment was difficult. Thanks to all the people that helped me to see the light. I study hard to become engineer so that I can build hospitals that are friendly to children so that they don’t fear hospitals like I did.

Dear supporters and volunteers,

Thank you for supporting us in this campaign and letting children and adolescents with cancer know that you fully support them. We are fortunate to have groups of passionate people in our global CCI and SIOP family to support and engage in this global campaign.

Thank you very much for the valuable contribution of the following team in helping to develop this toolkit and the interactive, web-based Tree of Life.
